

PASSENGER

CS5 Ultra Touring™

All-Season

PREMIUM LIMITED WARRANTY
FREE 45-DAY ROAD TEST!
W-RATED 50,000 MILE TREADWEAR PROTECTION
V/H-RATED 60,000 MILE TREADWEAR PROTECTION
PREMIUM LUXURY TOURING

The CS5 Ultra Touring provides real-life performance, in real-life conditions for everyday drivers. The new CS5 is crafted with leading technology and innovations that meets the needs of today's consumer.

Fitments:

Honda Accord, GMC Acadia, Nissan Maxima, Toyota Camry

3D MICRO-GAUGE™ GROOVES

These sipes are an innovative technology that allows the tread elements of the tire to interlock which stabilizes the tread. This maximizes tread contact with the road surface to grip the road better significantly in wet conditions and light snow resulting in superior handling and increased traction.

MORE SIPING AT HALF-WORN

The CS5 Grand Touring has 40% more sipe length remaining at half-worn than the previous generation tire (CS4). Therefore, at half-worn the CS5 will have more siping left aiding in performance and improving it's worn appearance.

WEAR SQUARE™

This is a visual wear indicator so that as your tire wears the shape of the visual wear indicator will change allowing you to approximate the tread life remaining on your tires. Knowing the approximate tread life remaining on your tires can give you more confidence in your vehicle. If the inner and outer "Wear Square™" is at different stages, this indicates a possible wheel alignment issue allowing you to seek professional service.

STABLEEDGE™

"Stabiledge™" is the bumper strategically located in several grooves of the tire's tread which help stabilize the tread elements during driving conditions, enhancing the steering precision while providing a better feel for the road. The Stabiledge™ feature also assists in keeping the grooves open at the "tire-to-road" contact area providing good traction.

ASYMETRICAL TREAD PATTERN

Advanced 5-rib asymmetric tread pattern design reduces irregular wear by allowing tires to be rotated from one side of the car to the other. The result is sustained tire performance with even wear, less noise, and increased overall tread life. The asymmetric pattern also allows the outside of the tread pattern to be tuned with large, rigid tread elements for superior dry handling and traction while the inside is optimized for wet and light snow conditions.

LIGHT WEIGHT CONSTRUCTION

Light weight construction and design for less rolling mass and increased fuel efficiency.

NEW GENERATION COUPLED SILICA COMPOUND

The secret to any tire's traction begins at the molecular level. Silica provides exceptional all-season performance, improves braking, reduces heat generated in the tire and lowers rolling resistance for better fuel mileage. Cooper's unique blend of silica has up to four times more silica than the previous generation of premium all-season tires which dramatically increases this tire's performance. The CS5 Touring will be the first to use Cooper's new second generation coupled silica compound.

DUAL PITCH SEQUENCE

A newly optimized dual pitch sequence ensures low tire noise coupled with premium ride and comfort.

Visit cooperworld.net for up-to-date spec information.

Replacing the CS4 Touring - Available April 2014!

ALWAYS CONSULT AND FOLLOW THE VEHICLE MANUFACTURER REPLACEMENT TIRE RECOMMENDATIONS AND WARNINGS. Use the information on the vehicle placard and vehicle owner's manual to identify original equipment inflation pressure, tire size, speed rating and load carrying capacity. Cooper Tire reserves the right to change and improve construction, materials or specifications without notice or obligation. Please refer to the back cover of this book for important tire safety considerations and recommendations.
